Task - 2 : Arithmetic Operations

- Create one Java Project in your eclipse.
- Create two int variables.
- Create one float variable.
- Do all arithmetic operations on the first 2 int variables and print output in below shown format(highlighted in green colour).
  - Example :
  - Input : a = 10, b = 20
  - **Output : 10 + 20 -> 30**
- Do all arithmetic operations on one int variable and one float variable and print output in below shown format(highlighted in green colour).
  - Example :
  - Input : a = 10, b = 5.0
  - **Output : 10 * 5.0 -> 50.0**
