

Smart Bank Management System

Problem Statement

Traditional banking systems require customers to visit the bank for many services, leading to inefficiency. This **Smart Bank Management System** provides an online banking platform where users can:

- **Manage accounts**
 - **Perform transactions**
 - **Apply for loans**
-

◆ Features

Customer Functionalities

- ✓ **User Registration & Login** – Secure login with email OTP verification.
- ✓ **Account Dashboard** – View balance, transactions, and loan status.
- ✓ **Fund Transfer** – Transfer money using account number or UPI ID.
- ✓ **Mini Statement** – Get last 10 transactions in a detailed view.
- ✓ **Loan Application** – Apply for loans and track approval status.

Admin Functionalities

- ✓ **Approve Loan Requests** – Review and approve/reject loans.
 - ✓ **Manage Customers** – View and manage all customer accounts.
 - ✓ **Generate Reports** – Monthly/annual transaction reports.
-

Tech Stack

- **Backend:** Spring MVC, Spring ORM(JPA)
 - **Frontend:** JSP, HTML, CSS
 - **Database:** MySQL
 - **Server:** Apache Tomcat
-

Workflow

1. **User Registration/Login**

- Customers register with their KYC details.
 - 2. **Dashboard Access**
 - Customers can check account details, transactions, and balance.
 - 3. **Fund Transfer & Transactions**
 - Users can transfer money and check past transactions.
 - 4. **Loan Application & Approval**
 - Customers apply for loans → Admin reviews & approves/rejects.
-

Expected Outcomes

- ✓ Fully functional online banking platform.
- ✓ Easy money transfer, loan management, and service requests.
- ✓ Better financial planning through savings goals.
- ✓ Admin dashboard for tracking transactions & fraud detection.
